

**GRADE 1  
SCIENCE ORDER OF INSTRUCTION**

<b>1<sup>st</sup> Nine Weeks</b>	<b>2<sup>nd</sup> Nine Weeks</b>	<b>3<sup>rd</sup> Nine Weeks</b>	<b>4<sup>th</sup> Nine Weeks</b>
<b><u>Body of Knowledge:</u> Life Science</b> (3 benchmarks)	<b><u>Body of Knowledge:</u> Earth and Space Science</b> (7 benchmarks)	<b><u>Body of Knowledge:</u> Physical Science</b> (3 benchmarks)	<b><u>Body of Knowledge:</u> Life Science</b> (2 benchmarks)
Big Idea 14: Organization and Development of Living Organisms	Big Idea 5: Earth in Space and Time  Big Idea 6: Earth Structures	Big Idea 8: Properties of Matter  Big Idea 12: Motion of Objects  Big Idea 13: Forces and Changes in Motion	Big Idea 16: Heredity and Reproduction  Big Idea 17: Interdependence

**Big Idea 1: The Practice of Science**

The Practice of Science benchmarks should be introduced during the first nine weeks and then embedded in all science lessons throughout the year as they blend easily with teaching inquiry and are the basis of an activity/lab-based science classroom. In first grade, the Practice of Science focuses heavily on the introduction and implementation of science processes: raising questions, investigating questions in teams, using the five senses to make observations, comparing observations, keeping records, and generating conclusions. Lab safety and the use of scientific tools should also be introduced at the beginning of the year and re-addressed throughout the year.

**Rationale for Grade 1 Order of Instruction:**

**1<sup>st</sup> Nine Weeks**

Life Science is taught during the 1st nine weeks because brain-based research shows that kindergarten students are still developmentally “All about Me.” Teacher input was considered regarding whether to study plants early in the school year (apples and pumpkins) or in the spring (seeds, gardens, flowers). Splitting the Life Science Body of Knowledge gives the teacher/students a chance to revisit life sciences at the end of the year.

**2<sup>nd</sup> Nine Weeks**

Earth and Space Science is taught during the 2nd nine weeks because that time of year provides optimal opportunities for night time viewing of the sky as the sun begins to set earlier during the late fall and early winter months.

**3<sup>rd</sup> Nine Weeks**

Physical Science is taught during the 3<sup>rd</sup> nine weeks because force and motion concepts are more challenging and abstract, making them more appropriate for later in the year.

**4<sup>th</sup> Nine Weeks**

Life Science is taught during the 4<sup>th</sup> nine weeks because many teachers prefer to teach life/environmental studies in the spring. During the year, the primary students’ world expands and is no longer “All about Me.” In the fall, students are introduced to living things and their characteristics. In the spring, the understanding of living things expands to include reproduction and interdependence. This expansion coincides with the seasonal life cycle changes of living things in their changing world.

<b>GRADE 1</b>	
<b>BODY OF KNOWLEDGE: EARTH AND SPACE SCIENCE</b>	
<b>BIG IDEA 5: EARTH IN SPACE AND TIME</b>	
Humans continue to explore Earth's place in space. Gravity and energy influence the formation of galaxies, including our own Milky Way Galaxy, stars, the Solar System, and Earth. Humankind's need to explore continues to lead to the development of knowledge and understanding of our Solar System.	
<b>ESSENTIAL QUESTIONS</b>	
How many stars are in the sky? How does gravity affect our daily lives? How can magnifiers help us to make better observations? How is the Sun both beneficial and harmful to us?	
<b>BENCHMARKS AND TASK ANALYSES</b>	
<p><b>SC.1.E.5.1</b> Observe and discuss that there are more stars in the sky than anyone can easily count and that they are not scattered evenly in the sky. The student:</p> <ul style="list-style-type: none"> <li>records personal observations of the sky during the night hours focusing on the placement and amount of stars (many or few).</li> <li>discusses personal observations emphasizing that there are more stars in the sky than one can easily count and they are not scattered evenly.</li> </ul> <p><b>SC.1.E.5.2</b> Explore the Law of Gravity by demonstrating that Earth's gravity pulls any object on or near Earth toward it even though nothing is touching the object. The student:</p> <ul style="list-style-type: none"> <li>explores how objects fall, or are pulled, to the Earth's surface, even when there is nothing touching the object.</li> </ul> <p><b>SC.1.E.5.3</b> Investigate how magnifiers make things appear bigger and help people see things they could not see without them. The student:</p> <ul style="list-style-type: none"> <li>observes various objects with and without magnifiers and discusses how observations differ.</li> <li>observes the differences in observations when using a variety of magnifiers (including hand lenses, telescopes, binoculars, microscopes).</li> </ul> <p><b>SC.1.E.5.4</b> Identify the beneficial and harmful properties of the Sun. The student:</p> <ul style="list-style-type: none"> <li>identifies the beneficial and harmful properties of the Sun through discussion, experimentation, and literature experiences.</li> </ul>	
<b>OCPS ESSENTIAL LABS</b>

<b>GRADE 1</b>	
<b>BODY OF KNOWLEDGE: EARTH AND SPACE SCIENCE</b>	
<b>BIG IDEA 6: EARTH STRUCTURES</b>	
<p>Humans continue to explore the composition and structure of the surface of the Earth. External sources of energy have continuously altered the features of Earth by means of both constructive and destructive forces. All life, including human civilization, is dependent on Earth's water and natural resources.</p>	
<b>ESSENTIAL QUESTIONS</b>	
<p>What makes up the surface of the Earth?            Why do we need water?            How does the surface of the Earth change?</p>	
<b>BENCHMARKS AND TASK ANALYSES</b>	
<p><b>SC.1.E.6.1</b> Recognize that water, rocks, soil, and living organisms are found on Earth's surface.  <b>SC.1.E.6.2</b> Describe the need for water and how to be safe around water.            The student:</p> <ul style="list-style-type: none"> <li>• describes the need for water.</li> <li>• recognize how to be safe around water.</li> </ul> <p><b>SC.1.E.6.3</b> Recognize that some things in the world around us happen fast and some happen slowly.            The student:</p> <ul style="list-style-type: none"> <li>• records long term observations of various places during different times of the year to see fast and slow changes (soil, plants, weather).</li> <li>• discusses current events to recognize that things can happen quickly or slowly in our world.</li> </ul>
